

Brand Name	ALLOY 90 ¹⁾		
Material Code	2.0811		
Abbreviation	CuNi10		
Chemical Composition (mass components) in %			
Average values of alloy components	Cu	Ni	
Rem.	10		

Form of Delivery

ALLOY 90 is supplied in the form of round wires in the range 8.0 to 0.05 mm Ø in bare or enamelled condition, also with rayon or silk

covering. To a limited extent flat wires, stranded wires, ribbons and sheets are also manufactured.

Properties and Application Notes

ALLOY 90 is especially noted for low resistivity and high resistance to oxidation and chemical corrosion. It is used for low-value resistors, for heating wires and mats in heating cords and in heating cables with low conductor temperatures, as well as for tube-weldings "electrical-welding-fittings". Ribbons are used for heating of bimetals. The maximum working temperature in air is 400 °C.

1) The number "90" indicates the resistivity, expressed in Ohm/cir. mil ft. (see Technical Information).

2) This value applies to wires of 2 mm diameter. For thinner wires the minimum values will substantially increase, depending on the dimensions.

Notes on Treatment

ALLOY 90 can be worked easily. This alloy can be soldered and brazed without difficulty. All known welding methods can be used.
