| Brand Name | A-COPPER 2.5 ¹⁾ | | |
| Material Code | | | |
| Abbreviation | CuNi1 ²⁾ | | |
| Chemical Composition (mass components) in % | | | |
| Cu Rem. | Ni 0.6 | | |

Form of Delivery

A-COPPER 2.5 is supplied in the form of round wires in the range 8.0 to 0.05 mm Ø and stranded wires. On request, larger quantities can be delivered in other forms.

Properties and Application Notes

A-COPPER 2.5 is especially characterized by very low resistivity. This alloy is used for heating wires and mats in heating cords and in heating cables with low conductor temperatures as well as tube weldings "electrical-welding-fittings". It provides a relatively high corrosion resistance. Ribbons for instance are used for heating of bimetals. The maximum working temperature in air is 200 °C.

Electrical Resistance in Annealed Condition

| Temperature coefficient of electrical resistance between 20 °C and 105 °C 10 ⁻⁶ /K | Electrical resistivity in: µΩ x cm (first line) and Ω/CMF (second line) Reference values | | | | | |
|--|---|-----------|-----------|--------|--------|--------|
| | 20 °C tolerance ±10% | 100 °C | 200 °C | 300 °C | 400 °C | 500 °C |

| 8.9 | 0.32 | 1085 | 0.38 | ≈ 200 | 17 | 18 |

Strength Properties at 20 °C in Annealed Condition

| Tensile Strength ³⁾ | | Elongation (L ₀ = 100 mm) % at nominal diameter in mm | | | | |
|--------------------------------|-------|--|-----------------|----------------|------------|------|
| MPa | psi | 0.02 to 0.063 | >0.063 to 0.125 | > 0.125 to 0.5 | > 0.5 to 1 | > 1 |
| 220 | 32000 | < 10 | ≈ 10 | ≈ 15 | ≥ 20 | ≥ 25 |

1) A-COPPER 2.5 must not be confused with A-COPPER 11,

the latter being exclusively used for thermo compensation cables according to IEC 60584.

2) A-COPPER 2.5 is not a standardized alloy.

3) This value applies to wires of 2 mm diameter. For thinner wires the minimum values will substantially increase, depending on the dimensions.

Notes on Treatment

A-COPPER 2.5 can be worked easily. This alloy can be soldered and brazed without difficulty. All known welding methods can be used.

| Nominal Diameter d mm | Cross Section mm ² | Weight per 100 m g | DC Resistance Referred to Length at 20 °C Ω/m | | | |

Tolerance values on request

A-Copper 2.5 is not a standard resistance alloy.

Therefore this table contains no minimum and maximum values. The nominal values quoted are derived from the resistivity.

The tolerance values must be separately be agreed upon.
